Remerge maximizes the **efficiency, accuracy** and **participant engagement** for facilitated workshops.

It promotes the **emergence of innovative ideas**, a **can-do workshop energy**, and **speedy** assessment to what your participants are truly thinking.

Participants perform activities on individual input devices enabling a 'group' – discussion that is faster, more accurate and **totally inclusive**. This promotes a positive and open attitude which is carried across to breakouts or table discussions.
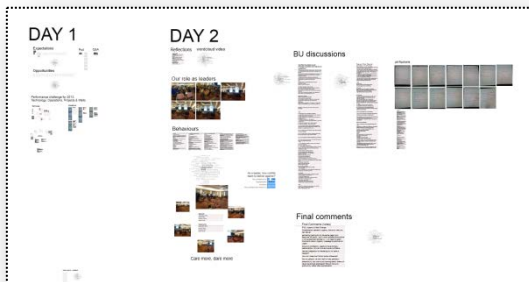

Activities can be **pre-set or** can be created in **real-time** if the facilitation requires it – e.g. follow-up questions / votes on topics that have only just emerged a few seconds ago.

Capture most of your workshop digitally and inclusively on an virtual canvas. Using camera phones even non-digital activities can be presented quickly, making plenary session a breeze.

Developed for and **by expert facilitators** to maximize the quality of the outputs by increasing the engagement with the participants in the short and valuable time.
